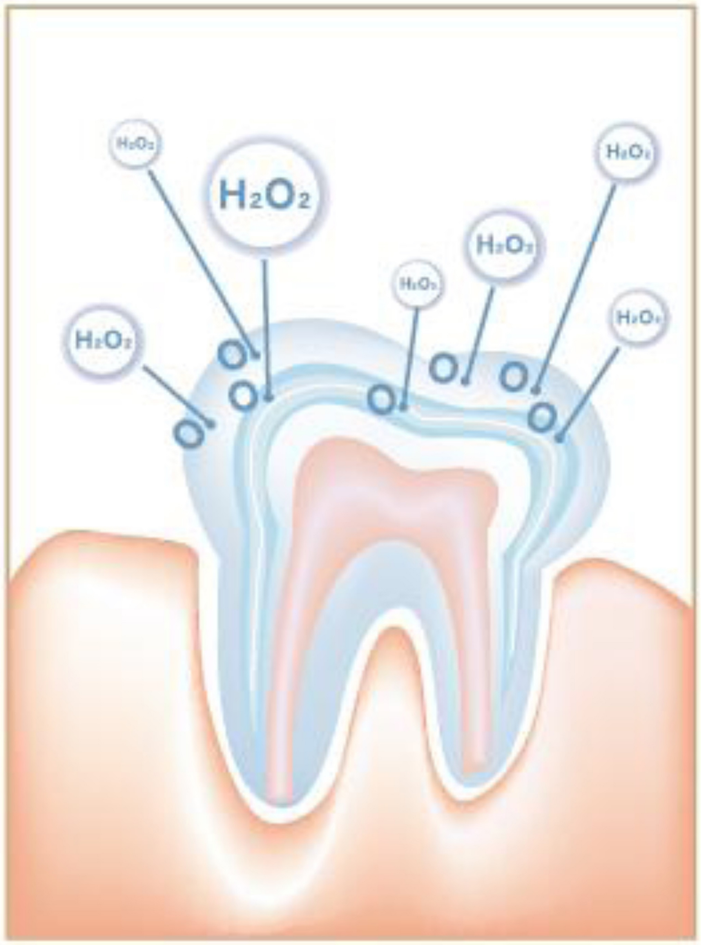
W-Gel Whitening Materials

Designed with additional catalyst and broader light activation spectrum for use with light accelerated whitening system. Maximum strength of 35% hydrogen peroxide whitening gel. Sticky & high viscous gel that does not dry quickly

1) Meximum strength whitening gel
2) Polishing agent
3) Sticky & high viscous gel
4) Whitening : Apply 3 times, 10min. for result
5) Orange Flavor



INSTRUCTION FOR USE

1. Perform a pre-treatment oral exam and consult with the patient on his or her desired whitening results to determine the best treatment plan for his or her individual situation.
2. Apply lip protection cream and insert Cheek Retractor
3. Determine the existing tooth shade.
4. Dry the teeth and gums. Apply Dentto-Dam for Gingival Protection. Light cure in a circular motion.
5. Mix uniformly 1ml of W-gel with 2 capsules of activator.
6. Mixing W-GEL with Activator liquid and place on a 2-3 mm layer W-Gel to the dry surface of the teeth
7. Apply the accelerating lamp
8. At the end of the ten-minute cycle, use dry suction to remove the whitening gel. DO NOT rinse with water. Repeat two more times for a total of three, ten-minute treatment cycles.
